## BHOU3 Remedial Investigation

The **Final Coeur d'Alene Basin Remedial Investigation (RI) report** was issued by EPA Region 10 on October 2, 2001. The RI report summarizes data and analyses on the nature and extent of mining contamination in the Basin. Data have been collected and analyses conducted through the RI/FS process of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), 42 U.S.C 9601 et seq., and the implementing regulations in the National Oil and Hazardous Substances Pollution Contingency Plan (NCP), 40 CFR Part 300. The information presented in the RI report will be used to evaluate risks to human health and the environment and potential remedial alternatives.

Many changes were made to the Remedial Investigation report in response to comments received during the comment period (Nov. 9, 2000 to March 12, 2001). The report was improved as a result of the comments received. A written response to comments is provided in Appendix L to the RI report. While public reviews and written responses to comments are not normally done on draft remedial investigations, this level of effort seemed appropriate given the high level of interest in this site.

The Coeur d'Alene Basin RI is **available in three different formats** due to the large size of document: (1) as a CD-Rom with the complete RI, (2) as an Introduction/Summary Volume (one - 4 inch binder) or (3) as a complete set (ten - 4 inch binders). To request a copy of the RI, please contact [Anne Dailey](#) at 206-553-2110.
